Post-Activity
Effective Feedback

This activity is intended to reinforce your learning from the session, ensuring you can put the skills gained into practice in your everyday setting.

Preparation

Identify the type of feedback you want to give (mid-term feedback, end of term assessment, Mini-CEX feedback, performing a clinical skill, handover).

Activity

Give this feedback to the junior doctor.

What have you noted different in your feedback style from the first feedback you did with the scenario of Dr Will Behaviour?

Do you feel more confident?

Are you more aware of the importance of feedback and what constitutes feedback?

Do you understand the importance of feedback and its relation to performance and learning?

What did the junior doctor think?
